The AJ Buildings Library will provide project data, drawings and images for exemplar projects in British architecture from the UK's leading practices.

The AJ Buildings Library is an expanding database containing around 1000 projects with dozens more being added each month. Each building profile contains architectural photographs, drawings (plans, elevations, sections, working details) and full project data. The library can be searched by building type, architect, design detail, year, location, material, area and cost. It will offer an unparalleled resource for precedent studies and design inspiration.
